Siena

You don't need to open the windows for fresh air in your kitchen. Bari's powerful 1000m³/h range hood motors quickly evacuates unwanted odors and steam with its high-performance hoods.

All sides of the oven are covered with glass wool that provides special heat insulation. This is trapping the heat in the boiler and increase effiency. Other hand this saves energy.

The thermal protection system protects your oven against electrical surges.

Safety thermostat and cooling fan, protects counters and cabinets unwanted deformations.

You can easily clean your oven enemaled boiler from dirt.

Also it's easy to clean removable and disassembly oven front glass door.

Aliminum Filter
We use three layered aluminum filters for long time usage. This filter absorves oil and solid particules inside and distrubutes clean air. This filter is can be cleanes in the whashing machine for your comfort.

LED Lights
Led lights have long life time than halojen bulbs and they expend less electricity but bives more light.

Silence Motor
Level of noise is measured as decibel (dB). Less decibel means more silence motor.
High quality copper wired motors provides more power with less noice. More efficent motors have no trouble in long time usage. This product is working 52dB sound level.

3 Speed Level
With differnet levels of motor evacuate undesirable smells and vapor.

Evacuate while stand by option
Smells and vapor is filtered with extra carbon filter. (*) This is used at the places where the chimney is not possible. For better performans you have to change the carbon filter regularly.

Attention! Carbon filter is extra option for hoods.

Evacuate while stand by option
Some other hood models at the market don't evacuate while stand by position bacause of the slide.
Our model has no slide to offor more performans even the motor is off.

Long lasting controls
Shiny and esthetic design of buttons are strength with an special design stand.

High evacuation
600m^3/s high evucuating of motor provides a better wether cleaning even when you are frying.

Aluminum wired motors show more resistance and because of this warm up more than copper wired. Because of this life time of the motor reduces even causes a fire. We do not use aluminum wired motors, we use copper wired motors.

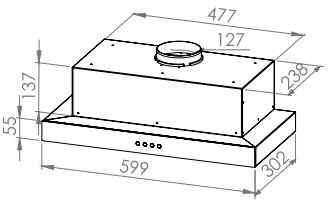
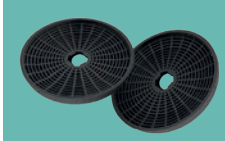
Optional Features
- Carbon filter





(*) Charcoal rangehood filters are used for ductless rangehoods. These are perfect appliances for apartments or other small accommodation, where ducting is not an option.
The charcoal/ carbon filters work by collecting airborne grease, smoke and smells while cooking, and recirculating the fresh air back into the kitchen.
